

MBUS PRO REAR

POSITION SIGHT ON RAIL

NOTE: Flip sight up for easier install.

Using a 1/8" hex key or flat head screwdriver, loosen the 10-24 Dual-Drive Screw enough to mount MBUS Pro sight onto the rail. Position the sight so the Sight Arm folds down to the rear. When sight is in the desired position, proceed to next step.

TIGHTEN SIGHT ON RAIL

Using same 1/8" hex key or flat head screwdriver, hand tighten the screw to finish mounting the sight.

DO NOT OVER-TIGHTEN: this may cause damage to the rail or sight.

WINDAGE ADJUSTMENT

To adjust left-right point of impact (POI), use the Windage Adjustment Knob on the right side of the rear MBUS Pro sight. Turn knob in the direction indicated to move the POI to the right. Turn knob in the reverse direction to move POI to the left.

Note: Each click adjusts the POI ~.56 (9/16) inches at 100 meters for a typical M4-type Carbine. Your results may vary depending on your weapon and the rail position of your sights (sight radius).

APERTURE TOGGLE

For low light or close-range target engagement, use the large aperture by placing thumb nail behind the Aperture Flip Tab and pushing forward. To return to using the small aperture, flip back into place.
